CHAPTER	TITLE	PAGE
	TITLE OF PAGE	i
	DECLARATION	ii
	DEDICATION	v
	ACKNOWLEDGMENTS	vi
	ABSTRAK	vii
	ABSTRACT	viii
	TABLE OF CONTENTS	ix
	LIST OF TABLES	xiii
	LIST OF FIGURES	xiv

1	INTRODUCTION	
1.1	Introduction	1
1.2	Problem Statement	3
1.3	Purpose of the Study	4
1.4	Objectives of the Study	4
1.5	Scope and Limitation of the Study	4
1.5.1	Scope	5
1.5.2	Limitation	5
1.6	Study Area	5
1.7	Importance of the Study	7
1.8	Organization of Research	7
1.9	Summary of the Chapters	8
2	SOLID WASTE MANAGEMENT	
2.1	Introduction	10
2.2	Waste Management	10
2.3	Solid Waste	13
2.4	Collection	16
2.5	Transportation	19
2.5.1	Motor Vehicle Transport	20
2.5.2	Transport Vehicle for Uncompacted Waste	21
2.6	Landfill	22
3	GEOGRAPHY INFORMATION SYSTEM	
3.1	Introduction	26
3.2	Geography Information System	26
3.2.1	Component of Geographic Data	29
3.2.2	Data Organizations in GIS	29
3.2.3	GIS Software	31

3.3	Network Analysis	33
3.3.1	Basic Principles of Network Analysis	35
3.3.2	GIS Network Analysis	36
3.4	Dijkstra's Algorithm in Network Analysis	38
3.5	Case Study	40
4	SOLID WASTE MANAGEMENT IN BATAM	
4.1	Introduction	42
4.2	Profile of Study Area	42
4.2.1	Batam in Figure	42
4.2.2	Land use	44
4.3	Waste Management in Batam	47
4.3.1	Solid Waste in Batam	47
4.3.2	Waste Management	48
4.3.3	Field Condition of Waste Management in Batam	48
4.3.4	Waste Management Service in Batam	49
4.4	Database Development	57
4.5	Using Dijkstra's Algorithm in Network Analysis	59
5	RESEARCH METHDOLOGY	
5.1	Introduction	59
5.2	Data Preparation	60
5.3	Available Site Selection	62
5.4	Network Analysis	62

6	BEST ROUTE AND CLOSEST FACILITY ANALYSIS	64
6.1	Introduction	65
6.2	Identifying alternative landfill sites	66
6.2.1	Digitizing Area Boundary and Road	67
6.2.2	Creating Slope from Elevation	68
6.2.3	Environment Sensitive Area	71
6.2.4	Site Selecting Process	73
6.2.5	Site Selecting Model	76
6.3	Number of Waste Generated and Truck Capacity	78
6.4	Network Analysis	77
6.4.1	Creating Topology for Road Data	81
6.4.2	Creating New Network Dataset	83
6.5	Identifying Service Area	85
6.6	Identifying the Best Route and Closest Facility	89
6.7	Conclusion	99
7	DISCUSSION AND SUGGESTION	100
7.1	Introduction	100
7.2	Research Findings Formula	101
7.3	Issues and Problem of Study	101
7.4	Suggest Landfill Area and Route For Collection	102
7.4.1	Suggest Suitable Landfill	102
7.4.2	Best Route and the Closest Landfill.	102
7.4.3	Service Area	102
	REFERENCES	106

LIST OF TABLE

TABLE NUMBER	TITLE	PAGE
2.1.	Source of solid waste within a community	14
4.1.	Landuse of Municipal of Batam	45
4.2	Location of Waste Transit Point in Batam Island	49
4.3	Waste Generates	56
4.4	Data Modeling in Research	57
5.1:	Database structure for the study	63
6.1	Allocate The Number of Trip	80
6.2.	Comparison Covered Area	87
6.3	Waste Carried, Transfer Point Covered Each Sites	88
6.4	Result Length and Time From Each	94
6.5	Amount of Waste in Each Route –Site 1	95
6.6	Amount of Waste in Each Route –Site 2	96
6.7	Amount of Waste in Each Route –Site 3	97
6.8	Amount of Transit Point, Waste, Length and Time	98

LIST OF FIGURES

FIGURES NUMBER	TITLE	PAGE
2.1	Figure 2.1. Typical system for Solid Waste Management.	12
2.2	Examples of refuse collection vehicle	20
2.3	(a) Truck (also truck chassis with detachable body), (b) truck-trailer combination, (c) tractor-semitrailer combination, and (d) tractor-semitrailer-pull trailer combination (often identified as a set of doubles)	21
2.4.	Typical transport vehicle used in conjunction with transfer facilities :	22
	(a) Open-top semitrailer with moving floor unloading mechanism	
	(b) Enclosed semitrailer used stationary compactor	
	(c) Drop-bottom open-top semitrailer unloaded with hydraulic tipping ramp.	

3.1.	Geography Data	30
3.2	GIS data “Layer”	30
3.3.	Road Network (Nod and Connection)	34
4.1.	Landuse Of Batam Batam Island	44
4.2	An example of Dijkstra’s algorithm (Orlin 2003).	59
5.1:	Research Methodology to find the best route for the trucks to the best site	62
6.1.	Conceptual Framework of Analysisist	67
6.2	Digitizing the new shape file to get the boundary of the area	68
6.3	Road made base on main hierarchy : artery, kolektor, local, non/other	69
6.4	Elevation Layer	70
6.5	Slope Layer	70
6.6	Classification Slope	71
6.7.	Slope Layer after Classify	71
6.8.	Extract from landuse, create shapefile ESA	72

6.9	Reselect landuse that out from the analysis.	73
6.10.	Buffer Process	74
6.11.	Dissolve Process	75
6.12	Union Process	76
6.13	The result of alternative suitable landfill	77
6.14	Create road network topology	82
6.15	Data attribute in road topology layer	83
6. 16	Topology Road	84
6.17	Service Area	86
6.18	Data utilized in the network analysis process	90
6.19	Process to find best route for every point and alternative site	91
6.20.	Set up the search Tolerance	92
6.21.	The best route from each sites	93
